

Sculpey® UltraLight™

The most revolutionary polymer clay in years

This versatile new clay is lightweight, extremely soft, easy to knead and turns hard as a rock when baked, so it won't break or crack.

Sculpey UltraLight is great for armatures since it is smoother and easier to work with than aluminum foil and keeps large beads light. When rolled thin and baked, the clay remains flexible, making it the ideal product for paper crafts. After baking, Sculpey UltraLight even floats!

Just like Original Sculpey, cured Sculpey UltraLight can be sanded, drilled, buffed and painted with 100% acrylic paints. This remarkable new clay brings a world of new opportunities to artists, crafters and clay users alike. Sculpey UltraLight will surely become an instant favorite.

Clay so versatile, the creative possibilities are endless!

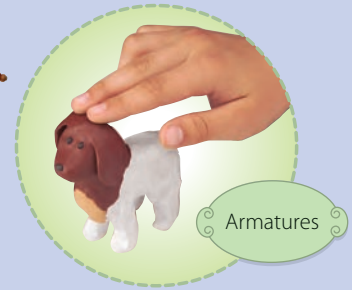

Sculpey UltraLight is durable and strong after baking, whether it's a large sculpture, a flexible paper craft or a floating project. This soft, lightweight and easy-to-handle clay can be used to create just about anything. Here are just a few ideas of what you can do with Sculpey UltraLight.

Jewelry

As fashion jewelry trends towards larger and larger pieces, Sculpey UltraLight will help keep those items comfortable and light as a filler for large beads.

Armatures

No more aluminum foil armatures! Sculpey UltraLight offers a smoother, more detailed base for projects.

Home Décor

Because it is lightweight, Sculpey UltraLight is perfect for large projects such as wonderful home décor items. Personalize your decorating with your own creative touch.

Christmas Ornaments

Christmas tree branches will be lighter than air. Sculpey UltraLight allows you to make ornaments that won't cause branches to sag.

Floating Projects

Sculpey UltraLight floats after baking! Let your imagination run wild.

Papercraft Projects

Sculpey UltraLight is strong, lightweight and flexible when baked in thin pieces. It is the ideal clay for scrapbooking and all types of paper crafts.

Basic Instructions

1. Start with clean hands and work area. Good working surfaces include a glass or metal surface, disposable foil or wax paper. Knead clay until soft and smooth. Shape clay.
2. Bake on an oven-proof glass or metal surface at 130°C (275°F for U.S. Consumers) for 15 minutes per 6mm (1/4") of thickness. DO NOT USE MICROWAVE OVEN. DO NOT exceed recommended temperature or baking time. Remove from oven and allow to cool. Children using clay should be supervised at all times. All baking should be done by an adult.
3. When used as a base for armatures or large beads, shape the Sculpey UltraLight to desired form and bake. Remove from oven and allow to cool. Cover Sculpey UltraLight base with Sculpey III or Premo clay and bake again. Sculpey III and Premo clay will chemically bond to the Sculpey UltraLight base when baked and make the final piece strong and crack resistant.
4. Once cool, baked pieces can be polished, sanded, drilled, carved and painted with 100% acrylic paints. If using oil-based or water-based acrylic paints, seal with Sculpey Glaze before painting. Pottery or dishes made from Sculpey UltraLight should be used for decorative purposes only, not with food, beverages or smoking materials.

CAUTION Many modeling clays contain ingredients that may stain or damage finished surfaces. Do not place unbaked clay on furniture, flooring, carpeting, or fabric. Protect finished surfaces by using unbaked Polyform clay products on a glass or metal surface, or use disposable foil or wax paper beneath your work.
